AB Quinaldine and naphthalene derivs. are useful as crystallization modifiers in the

process of grinding and recrystn. of crude quinophthalone pigments from aqueous or/and organic solvent/water mixts. into fine-particle pigments.

Thus, I

(prepared by heating a mixture containing 100 g of phenol, 34 g of 8-aminoquinaldine-5-sulfonic acid and 49 g of tetrachlorophthalic anhydride 8 h at 180°, cooling to 90°, adding 300 mL of methanol, washing and drying at 40°) is used in recrystn. of crude quinophthalone pigment having particle size 2 cm (Pigment yellow 138) from xylene solution with additives of aliphatic amines.

IT 30125-47-4P, Pigment yellow 138

AB Stable dispersions containing particles on intrinsically conductive polymers with average particle size <1 µm were manufactured by use of a liquid dispersant.

The films, sheets or plates made of such dispersion have a conductivity of >100 S/cm once the dispersant has been removed. The dispersions are manufactured by preparing intrinsically conductive polymers from monomers under controlled temperature conditions, grinding or dispersing the polymers in the presence of an inert nonpolymeric polar substance, and dispersing the product in a liquid dispersant. For example, dry polyaniline powder having conductivity 5 S/cm [preparation by polymerization of PhNH<sub>2</sub> with (NH<sub>4</sub>)<sub>2</sub>S<sub>2</sub>O<sub>8</sub> in the presence of p-MeC<sub>6</sub>H<sub>4</sub>SO<sub>3</sub>H given] was predispersed by rapid stirring for 3 min with 2 parts butyrolactone, extracted in fluidized bed with xylene and ground in a pearl mill with xylene to give highly viscous paste containing .apprx.4% polyaniline. The paste was diluted with CHCl<sub>2</sub>CO<sub>2</sub>H and CH<sub>2</sub>Cl<sub>2</sub> and spin-coated on a glass substrate to give 150-nm-thick film having conductivity 220 S/cm.

AB	The title colorant is capable of marking in $\geq 2$ different tones by applying $\geq 2$ laser beams having different energies to the different positions on a molding. The laser marking resin composition is capable of forming, for example, a colorant-derived chromatic color marking and a white marking on the surface of a molding giving a black or dark-color ground color. The colorant has a heating peak at 360-590° (measured by DTA). The laser marking resin composition includes a chromatic color colorant, a black substance (e.g., carbon black) that perishes itself or discolors when exposed to a laser beam, and a polymer, the contents of the colorant and the black substance being resp. 0.001-3 parts and 0.01-2 parts per 100 parts of the polymer.

AB	Pigment concs. with good brilliance consist of agglomerated particles (containing $\geq 1$ inorg. pigment having average particle size 0.08 - 10 $\mu\text{m}$ and $\geq 1$ organic pigment having average particle size 0.005 - 3 $\mu\text{m}$ and a dispersing agent) coated with modified siloxane or polysilane for lowering the abrasivity and improvement of dispersibility of the pigment and are prepared by wet grinding of the crude pigments in the presence of surfactants and blending and drying the blends. These concs. are useful for dyeing plastics, papers, for inks and paints and in building industry. A composition containing 1 weight part of Pigment Red 272, 4 parts of Pigment Brown 24 and 0.05-0.1 wt part of the surfactant Disperbyk 185 with 3-10 weight parts of water; the resulting slurry is milled, dried and deagglomerated, coated with trimethylsiloxo-terminated polydimethylsiloxane, milled again and exhibits a better dispersibility and decreased abrasivity, than uncoated pigment (Pigment Red 272).				
IT	30125-47-4, Pigment Yellow 138

OS MARPAT 138:57545

AB The dispersions contain a pigment, a dispersant, and an aqueous medium, where the dispersant is selected from naphthol compds. RkXAhBjOH (X = naphthalenediyl; R = C1-20 alkyl, Ph, naphthyl group; k = 0, 1-7; A, B = oxyethylene, oxypropylene unit or their combination; h, j = 31-100) which can be used with other dispersants. Thus, mixing Toner Magenta E 02 (pigment) 30 with an ethoxylated propoxylated 2-naphthol 15, heptaethylene glycol mono(5-tridecyl) ether 0.2, C13H27(OCH2CH2)7OH 0.2 and water 155 parts and grinding in a sand mill containing zirconia beads having diameter 0.3 mm for 48 h gave a pigment dispersion with good storage stability. An ink-jet ink containing the dispersion 40.00, glycerin 7.50, diethylene glycol 22.50, 2-pyrrolidone 3.00, C13H27O(CH2CH2O)3CH2COONa 0.45 and water 76.55 parts gave prints with good resistance to water.

AB A title polymer, specifically a polyaniline having elec. conductivity (4-point method on compressed powder tablet) >25 S/cm, is claimed. In the manufacturing process, a polymer powder having starting conductivity 1-5 S/cm is "ground" and/or dispersed in a fast mixer, a ball mill, or an ultrasonic blender, optionally in the presence of an elec. field, with a non-polymeric polar solid (BaSO<sub>4</sub>, TiO<sub>2</sub>, Pigment Yellow 18) or liquid (H<sub>2</sub>O, DMF, DMSO,  $\gamma$ -butyrolactone, N-methylpyrrolidone, dioxane, or lactones) having surface tension >30 dyne/cm. For example, intensive stirring of Versicon powder for 3 min with 2 vols.  $\gamma$ -butyrolactone gave a title powder which was compressed into a tablet having elec. conductivity

650 S/cm, vs. 5 S/cm for the starting powder.

AB Quinaldine and naphthalene derivs. are useful as crystallization modifiers in the

process of grinding and recrystn. of crude quinophthalone pigments from aqueous or/and organic solvent/water mixts. into fine-particle pigments.

Thus, I

(prepared by heating a mixture containing 100 g of phenol, 34 g of 8-aminoquinaldine-5-sulfonic acid and 49 g of tetrachlorophthalic anhydride 8 h at 180°, cooling to 90°, adding 300 mL of methanol, washing and drying at 40°) is used in recrystn. of crude quinophthalone pigment having particle size 2 cm (Pigment yellow 138) from xylene solution with additives of aliphatic amines.

IT 30125-47-4P, Pigment yellow 138

New CAS Information Use Policies, enter HELP USAGETERMS for details.

TSCA INFORMATION NOW CURRENT THROUGH JULY 14, 2005

Please note that search-term pricing does apply when  
conducting SmartSELECT searches.

\*\*\*\*\*

\*

\* The CA roles and document type information have been removed from \*  
\* the IDE default display format and the ED field has been added, \*  
\* effective March 20, 2005. A new display format, IDERL, is now \*  
\* available and contains the CA role and document type information. \*  
\*

\*\*\*\*\*

Structure search iteration limits have been increased. See HELP SLIMITS  
for details.

REGISTRY includes numerically searchable data for experimental and predicted properties as well as tags indicating availability of experimental property data in the original document. For information on property searching in REGISTRY, refer to:

<http://www.cas.org/ONLINE/UG/regprops.html>
